DETAILED ACTION

Claims 1-19 are pending.

Election/Restrictions

Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions, which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 1-3, 10-14, and 17, drawn to a method for producing a substantially isolated neural cell, characterized in that the method comprises carrying out the suspension culture of embryonic stem cells in the presence of an astrocyte conditioned medium or ingredients substantially equivalent to the conditioned medium, thereby obtaining a neuron.

Group II, claim(s) 1, 4-9, 15-16 and 18, drawn to a method for producing a substantially isolated neural cell, characterized in that the method comprises carrying out the suspension culture of embryonic stem cells in the presence of an astrocyte conditioned medium or ingredients substantially equivalent to the conditioned medium, thereby obtaining a glial cell.

Group III, claim(s) 1, 8, 9, 19, drawn to a method for treating a neurodegenerative disease or nervous damage, characterized in that the method comprises introducing into a neurodegenerative site or a nervous damage site at least one cell selected from the group consisting of a substantially isolated neural stem cell, a substantially isolated neuron and a substantially isolated glial cell.

The inventions listed as Groups I-II do not relate to a single general inventive concept under Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons:

The technical feature linking the inventions of Groups I-III is a substantially isolated neural cell, characterized in that the method comprises carrying out the suspension culture of embryonic stem cells in the presence of an astrocyte conditioned medium or ingredients substantially equivalent to the conditioned medium. **Arnhold et al**, (J Neurosurg, 93(6): 1026-1032, 2000) also teaches a method for producing a substantially isolated neural cell by cultivating mouse ESCs in suspension in the presence of an astrocyte-conditioned serum free medium

supplemented with insulin, transferrin, selen chloride and fibronectin as differentiation factors (p 1027, columns 1-2, under materials and methods section). Therefore the instant technical feature of Groups I-III does not make a contribution over the prior art.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement is traversed (37 CFR 1.143).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Magdalene K. Sgagias whose telephone number is (571) 272-3305.
